

Subscriber Management System

Product Overview

GOSPELL's GS-9350 GOSPELL's Subscriber Management System (SMS) supports flexible subscriber management and servicing operations, including value-added services such as message charging, voice charging and malfunction reporting. The system is based on modular design, so that customers are able to choose different modules and interfaces in accordance with their own needs, or request for dedicated modules and interfaces to achieve seamless merging with their existing systems.

Meanwhile, we could also integrate customer's office automation system, equipment management system and program management system onto a unified platform, with necessary re-design for system reliability and safety as a whole.
